Activated Carbon Filters: While HEPA filters are great at removing things like dust and pollen they aren't so good at removing odors. So, to solve this problem air purifier companies include carbon in the air purifier. Activated carbon has some special properties. Namely, that it can absorb gases. This means that as the odors are passing through your filter, the carbon can capture them.

DAP152BAW-I

DAP152BAW-I

4-in-1 Air Purifier

With True HEPA filter and Ionizer

Key Features

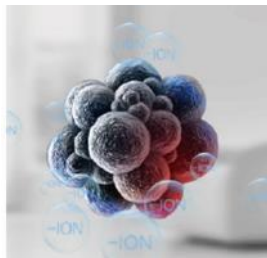

Ideal for small and medium room up to 22m²/236 sq ft

4-layer filter
Multi-stage purification for clean air

TRUE HEPA
Removes up to 99.97% of particles

Negative Ion Generator
Eliminates odors, dust, smoke and pollen particles

TRUE HEPA Filter
Captures 99.97% of microns

Ionizer Air Purifiers: The ionizer on an air purifier should be used because it will clump together the ultrafine particulates that are normally too small for a HEPA filter to catch. Ionization causes the tiny dust particles to become large enough to be captured inside the HEPA filter.

PM2.5 MOLECULES

PM2.5 molecules are small particulates in the air that reduce visibility and cause the air to appear hazy such as air pollution from cars.

When the PM2.5 feature is activated, the air purifier will measure the particles in the air and display the current level.

VOLATILE ORGANIC COMPOUNDS

Volatile organic compounds are a large group of chemicals found in many consumer products such as paint, varnishes, cooking oils, air fresheners, etc. These can often be released into the air and can pose health risks.

This air purifier will regularly measure the VOC in the air and display the ambient level on the display panel.
